

Health Information Exchange Incentive Program

Incentive Program Participation Details

Upper Peninsula Health Plan (UPHP) has established an incentive program to promote HIE use case adoption and active utilization across Upper Peninsula primary care practice units, specialists, and SNFs.

Contact UPHP if you are interested in participating in any of the following use cases:

Infrastructure

Active Care Relationship Service (ACRS)

The ACRS solution enables organizations to send data files which records the relationships between health professionals and patients at your organization. This data is then used to accurately route information for your patient's to all members of their care team.

Common Key Service (CKS)

Provides a consistent and reliable way to match patients with their electronic health information across multiple organizations, applications, and services with a behind the scenes unique identifier attached to a patient.

Data Retrieval

Consolidated Clinical Document Architecture (C-CDA) Discharge Summaries

The purpose of the C-CDA discharge summary use case is to assist healthcare providers in the retrieval of patient's electronic treatment information at the time of discharge from any statewide data submitter, if the provider has an active care relationship with the patient.

Admission, Discharge, Transfer (ADT) Alerting

The real-time statewide notification service is an all-payer, all provider solution, which routes ADT information regardless of where the patient has been admitted, discharged, or transferred.

Data Submission

Consolidated Clinical Document Architecture (C-CDA) Summary of Care

The purpose of the C-CDA summary of care use case is to provide and electronically submit to UPHIE/MiHIN so other downstream healthcare providers that have an active care relationship with a patient can retrieve pertinent information at the point of care.

Physician Payer Quality Collaborative (PPQC)

Enables providers, health systems, and provider organizations to consolidate and standardize the electronic exchange of quality-related data and performance results.
